Please Note: Prior to making this recipe, place the wine into a pot on the stove top and boil it for 30-40 minutes stirring periodically. When this time has elapsed, weigh out 259 grams, and carefully pour this into ice cube freezer trays. Freeze overnight. When you are ready to soap, the frozen wine is used as half of the water portion of the water/lye solution.

Caution: There is a chance that when mixing the frozen wine and water with the lye, a volcanic effect may take place. This is why it is recommended that you mix the frozen wine/water/lye in a deep mixing bowl in the sink.

Please Note: If you are using a wine that has a high sugar content, it will speed up gel. This will cause your soap batter to bubble up and out of the mold. You will want to watch for this as well as take proper precautions at safe guarding the surface your mold is sitting on.
